Silence Point Lounge

Silence Point is a versatile product family with the best acoustic properties, developed and optimized over many years. The modular system is broad and ranges from the classic museum bench to various sofa variants to complete work islands with or without a roof.

As the name suggests, the Silence Point Lounge models are not only at home in the exclusive lounge, they have long since found their way into modern and open office spaces. Whether with or without a backrest, the inviting models are extremely comfortable and their equipment is designed to meet the ergonomic requirements of everyday office life and its surroundings. There is a choice of 12 fabric collections with an almost unlimited variety of structures and colours including Passion with its beautifully textured wool fabric and its highly structured surface. The classic museum bench as a single or two-seater convinces in its clear and reserved formal language as a solitary or charmingly combined with a backrest. Equipped with a soft back cushion, these invite you to talk or just to linger.

SP Lounge Bench 2-seater
