

## Crazy Panel Suspended Screen – *Creativity and joie de vivre*

Crazy Panel stands for change, for joie de vivre and openness, for creativity and zest for action. Balanced in design - restrained and individually adaptable in its proportions to the respective room and work situation. The design is characterized by the rounded corners with a radius of 50 mm and the elegant surfaces made of 100% wool felt. Crazy Panel suspended walls have a total thickness of 14 mm, consisting of a 10 mm polyester core in a dark anthracite and a character-defining wool felt lamination on both sides. Whether for offices, conference rooms or lounges, the wool felt surfaces are available in three colors. Light gray mottled, a light gray with a varied melange. It is interesting and yet neutral enough to integrate into different styles and environments. Like the color green, pastel green stands for naturalness, contentment and hope and is considered one of the current trend colors in the living environment. Turquoise is the color of lagoons and the radiant sky above. It stands for clarity and spiritual openness, but also for freedom and awareness. The acoustic strengths of the three-layered panels lie in the medium to high octave bandwidths. They therefore make a valuable contribution to improving room acoustics. Crazy Panel pendant walls are available as individually suspended or with two or three elements arranged one above the other. Other variants are also available on request. The option of hanging the panels vertically offers further scope for room division and zoning. The stainless steel suspension kit included in the scope of delivery ensures stability and ease of installation. Be curious, be thirsty for action.

### Data Crazy Panel Suspended Screen

Wall thickness 14 mm

10 mm carrier board PES

2 x 2 mm wool felt lamination
